## BEFORE ORDERING

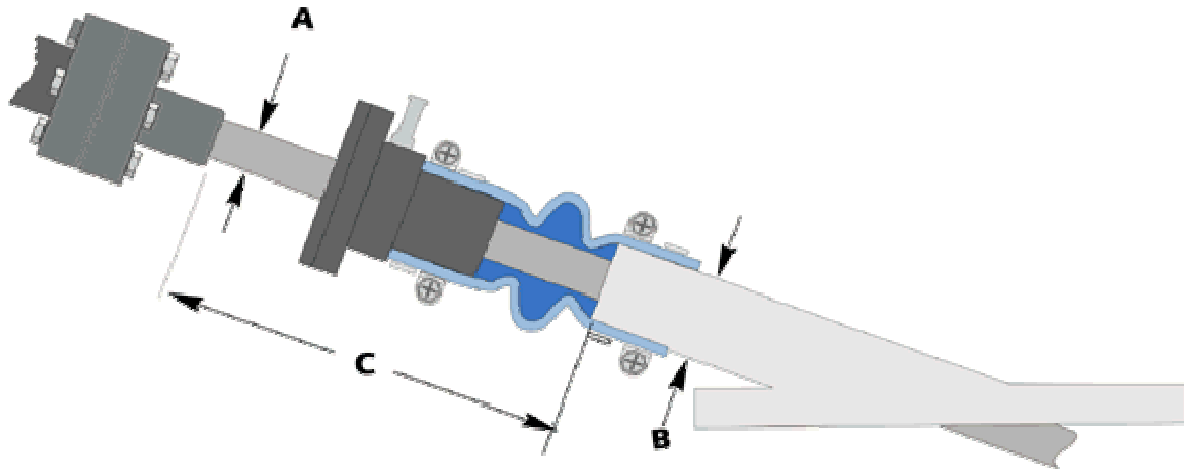

SureSeals™ and seriesOne™ are sold as complete kits with hose and clamps.

To determine which parts to order and be sure that you have sufficient space for the installation, you need to measure accurately “A”, the shaft diameter and “B”, the O.D. of the stern tube (which corresponds to the hose I.D.). In addition please advise dimension “C” to confirm how much CLEAN, SMOOTH shaft forward of the stern tube is available for locating the unit.

Please also confirm what material your propeller shaft is manufactured from.

In twin-engine applications, SureSeals™ are normally supplied with a “second injection fitting” to accommodate a crossover line between SureSeals™.

seriesOne™ seals are only supplied with a single injection fitting.

A = \_\_\_\_\_

B = \_\_\_\_\_

C = \_\_\_\_\_

Imperial or Metric

Shaft material \_\_\_\_\_

Single or Twin
